Deliver delivers the goods on ISIS 3PL

The newly formed Deliver.com.au has taken to the market with a bang and chooses ISIS Java4.2 3PL Warehouse Management System for its Multi Client 15,000 pallet Warehousing and Cross Dock facility in Derrimut Victoria Australia.

Matthew Blizzard Director of the newly formed Deliver Group said we were well aware of the Microlistics ISIS 3PL WMS and with its fully Integrated 3rd Part Billing module we would be able to not only provide an efficient and leading edge real time RF based warehousing operation for our Clients but also ensure we were able to capture all activities and display the real costs to our clients. The ISIS 3rd party Billing module gives us the opportunity to define each process in the warehouse including container unloading ,destuffing right through to load out and provide our Clients with accurate activity based costing including real "cost plus" service contracts where required said Mr. Blizzard. I signed off the contract in mid September and we will be live before end of October said Mr. Blizzard.

The ISIS 3PL WMS is a proven robust product and Australian owned and supported with many 3PL Clients so there was no need to look any further. We are pleased to be Partnering with Microlistics and will work with them on a Partnership arrangement as they do with their other Clients.

Derrimut is the first Site to go live and we will be rolling ISIS 3PL out in other Sites and States of Australia as we establish further multi Client warehouses and Cross Dock operations.

Deliver (On Time. Under Budget)
