

ISIS Integrated Billing generating \$\$\$

Melbourne, Australia – August 17, 2008 - Microlistics has formally launched its fully integrated ISIS activity based costing and 3PL billing module system.

Existing 3PL clients that have already integrated the new module have stated that their revenue has increased by 3-5%.

The increase of 3-5% in revenue comes at no additional cost to the business and in most cases provides a significant reduction (around 25%) in the activity to cash in the bank cycle for the 3PL.

Mr Lyndon Watson, Director of Don Watson Logistics said “ since we implemented the integrated ISIS ABC & Billing system we have reduced our administrative overheads by 1 FTE and we are now confident we have eliminated what were previous areas of revenue leakage. We are able to produce a pro-forma invoice automatically, quickly revue any exceptions and formalize our client invoice on a daily, weekly or monthly calendar period.”

Our experience in the 3PL industry has shown that variations in billing rate cards are significant in the flexibility of the ISIS WMS and the infinite configuration capability of the ISIS Billing system has played a major part in the exciting growth our business is experiencing.

Mr Mark Dawson, Managing Director of Microlistics Pty Ltd says ISIS Warehouse Management System combined with its management tools (ISIS Web, ISIS Billing, ISIS Console) has now become a major player in the Asia Pacific region and is already making significant inroads into the Middle East. New Projects are already underway in Qatar and Dubai.

Mark Dawson will be in Dubai visiting the GITEX exhibition.
