

## “Qatar strikes Gas, Oil and ISIS”

*Doha, Qatar, UAE – April 10, 2008* - Australia’s largest Supply Chain and Warehouse Management System developer Microlistics has completed its first Implementation in Qatar. The Implementation was the first of a number of sites for the publicly listed Gulf Warehousing Company (GWC).

[www.gulfwarehousing.com](http://www.gulfwarehousing.com).

The initial installation site is for the Qatar Port Authority that is now managed by the Outsourcing Division of Gulf Warehousing Company. **Mr Sanjeeve S.Thavarajah** said that the business process review and subsequent documentation of the Operating Functional Specification (OFS) undertaken by Microlistics Warehouse Consultants ensured a quick and successful implementation.

“We set ourselves a period of six months from contract signing with Qatar Port Authority to have the port operating efficiently and were live and operating within two months. It was one of the most successful Implementations I have ever been involved in” said **Mr Sanjeeve S. Thavarajah**

“The system has proven to be robust and reliable and our operations staff has not had any issues at all operating the system. The flexibility of ISIS means we can change the business process rules and configuration ourselves without the need for new software development as we incur new requirements from the Qatar Port Authority.”

“Our next stage is to now implement the ISIS Web tool which will give our Client and in turn their Customers the ability to enquire on order and stock status at the Port operations.”

Mr Mark Dawson, Managing Director of Microlistics said “Microlistics are very excited to win this contract with such a successful organization as Gulf Warehousing Company. It has provided Microlistics with a bulkhead in the Region with a well-known and respected 3PL organization. We have already had a number of enquiries from other organization in the Middle East Region including Qatar and Dubai and Abu Dhabi.”

Mark also stated “Microlistics are hoping to finalize another large contract with a significant 3PL organization planning to build a new DC at the Dubai Logistics City.”

Microlistics is a global Supply Chain execution technology solutions provider. As specialists in Supply Chain management, Microlistics combines practical knowledge and experience with leading edge software development.

Microlistics develops and implements the ISIS suite, a best of breed supply chain execution technology, to ensure distribution environments are robust yet highly flexible to react to market demands.

Microlistics helps organizations control their warehousing and inventory management functions, reduce operating costs and improve service to 'end user' customers.

The ISIS suite includes:

- \* ISIS Express, a pre-configured, off-the-shelf WMS solution;
- \* ISIS Enterprise, an advanced WMS providing seamless enterprise integration; and
- \* ISIS 3PL, a WMS solution for third party logistics providers. Includes ISIS Automated Billing, ISIS Web and ISIS Labor and Management Console.
